1 What will be the output of the following code snippet? def func(a, b): return b if a == 0 else func(b % a, a) **print(func(30, 75))** a) 10 b) 20 c) 15 **d)** 0 ans - c) 15 2 numbers = (4, 7, 19, 2, 89, 45, 72, 22) sorted_numbers = sorted(numbers) even = lambda a: a % 2 == 0 even_numbers = filter(even, sorted_numbers) print(type(even_numbers)) a) Int b) Filter

- c) List
- d) Tuple

ans - b) filter

- 3) As what datatype are the *args stored, when passed into
- a) Tuple
- b) List
- c) Dictionary
- d) none

ans - a) tuple

print(len(set1 + set2 + set3))a) 105 b) 270 c) 0 d) Error ans - d) error 5) What keyword is used in Python to raise exceptions? a) raise b) try c) goto d) except ans – a) raise 6) Which of the following modules need to be imported to handle date time computations in Python? a) timedate b) date c) datetime d) time ans - adatetime 7) What will be the output of the following code snippet? print(4**3 + (7 + 5)**(1 + 1))a) 248 169 b) c) 208 d) 233 ans - c) 208 8) Which of the following functions converts date to corresponding time in Python? a) strptime b) strftime c) both a) and b) d) None ans -d) none **9)** The python tuple is _____ in nature. a) mutable

b)immutable

c)unchangeable	
d) none	
ans – b) immutable	
10)	
The is a built-in function that returns a range object that consists series of integer numbers, which we can iterate using a for loop.	ch
A. range() B. set() C. dictionary{} D. None of the mentioned above Ans – A.range Question 11	
Amongst which of the following is a function which does not have any name?	
A. Del functionB. Show functionC. Lambda functionD. None of the mentioned above	
Ans – c. lambda function	
Question 12	
The module Pickle is used to	
A. Serializing Python object structure B. De-serializing Python object structure C. Both A and B D. None of the mentioned above Ans – c. both A and B	
Question 13	
Amongst which of the following is / are the method of convert Python objects for writing data a binary file?	in
A. set() method B. dump() method C. load() method	

Ans – B. dum()method

D. None of the mentioned above

Amongst which of the following is / are the method used to unpickling data from a binary file?

```
A. load()
    B. set() method
    C. dump() method
D. None of the mentioned above Ans – A. load()
 15.
 A text file contains only textual information consisting of ____.
     A. Alphabets
     B. Numbers
    C. Special symbols
     D. All of the mentioned above
Ans – D. All above
 16
 Which Python code could replace the ellipsis (...) below to get the following output? (Select all that
 apply.)
 captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
 }
     Enterprise Picard,
     Voyager Janeway
     Defiant Sisko
             a) for ship, captain in captains.items():
               print(ship, captain)
             b) for ship in captains:
               print(ship, captains[ship])
```

c) for ship in captains:

```
print(ship, captains)
```

d) both a and b

17)

Which of the following lines of code will create an empty dictionary named captains?

```
a) captains = {dict}
```

- b) type(captains)
- c) captains.dict()
- d) captains = {}

 $Ans - A. Captains = \{\}$

18) Now you have your empty dictionary named captains. It's time to add some data!

Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway", and "Defiant": "Sisko".

Which of the following code snippets will successfully add these key-value pairs to the existing captains dictionary?

```
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
```

b) captains["Enterprise"] = "Picard"captains["Voyager"] = "Janeway"captains["Defiant"] = "Sisko"

```
c) captains =
  { "Enterprise":
  "Picard", "Voyager":
  "Janeway", "Defiant":
  "Sisko",
}
```

d) None of the above

19) You're really building out the Federation Starfleet now! Here's what you have:

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
   "Discovery": "unknown",
```

Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it?

```
a) for item in captains.items():
    print(f"The [ship] is captained by [captain].")
b) for ship, captain in captains.items():
    print(f"The {ship} is captained by {captain}.")
c) for captain, ship in captains.items():
    print(f"The {ship} is captained by {captain}.")
d) All are correct

Ans – D.
```

20)

You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:

```
captains = {
    "Enterprise": "Picard",
    "Voyager": "Janeway",
    "Defiant": "Sisko",
    "Discovery": "unknown",
}
```

What statement will remove the entry for the key "Discovery"?

a) del captains
b) captains.remove()
c) del captains["Discovery"]
d) captains["Discovery"].pop()
Ans – C. delvcaptains ["Discovery"]
